DISCLAIMER

This report was commissioned and obtained by AECOM, an engineer retained by the Township for the completion of the Culvert replacement project ("Project").

We note that other reports in relation to the Project were also completed by the author, V.A. Woods Associates Limited ("VA Woods").

Various legal proceedings have been commenced against VA Woods in relation to its work on the Project. In such circumstances, the reader should be aware that certain persons take issue with VA Woods work on the Project. The readers should not conclude or believe that AECOM or the Township are in agreement that the facts, analysis, or conclusions in this report are correct (or incorrect) and the Township makes no representations regarding the accuracy of the facts, analysis, or conclusions of the report.

During the course of the Project other data was obtained and other reports completed by other engineers and contracting firms.

Further, it is alleged in various legal proceedings that, subsequent to this report, the Project resulted in settlement of the subject building and other nearby buildings and it is alleged that the events at the site and in the area may affect the conclusions in this report.

The Township strongly advises against reliance on this report. The Township makes absolutely no representations or warranties of the accuracy or suitability of this report. Any interested person should complete their own investigations of the subject property.

The Township has no liability for the use of this report by any person.

Stantec

Phase II Environmental Site Assessment, 23 Brock Street West, Uxbridge, Ontario

Final Report

February 28, 2025

Prepared for:
Township of Uxbridge
51 Toronto Street South
Uxbridge ON L9P 1H1

Prepared by:
Stantec Consulting Ltd.
200-835 Paramount Drive
Stoney Creek ON N2L 0A4

Project Number:
122140392.300

Limitations and Sign-off

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided. No other representations, warranties or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential liabilities associated with the identified property.

This report provides an evaluation of selected environmental conditions associated with the identified portion of the property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information. All information received from the client or third parties in the preparation of this report has been assumed by Stantec to be correct. Stantec assumes no responsibility for any deficiency or inaccuracy in information received from others.

The opinions in this report can only be relied upon as they relate to the condition of the portion of the identified property that was assessed at the time the work was conducted. Activities at the property subsequent to Stantec's assessment may have significantly altered the property's condition. Stantec cannot comment on other areas of the property that were not assessed.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available and the results of the work. They are not a certification of the property's environmental or geotechnical condition. This report should not be construed as legal advice.

This report has been prepared for the exclusive use of the client identified herein and any use by any third party is prohibited. Stantec assumes no responsibility for losses, damages, liabilities or claims, howsoever arising, from third party use of this report.

This report is limited by the following:

- Conditions observed on-site at the time of the 2024 field work.
- Regulatory criteria in effect at the time the assessment was completed.
- Results pertain only to the locations as shown on **Figure Nos. 4** and **5** in **Appendix A** and parameters listed in **Tables III** and **IV** in **Appendix E**.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures are not guaranteed. Before starting work, the exact location of all such utilities and structures should be confirmed and Stantec assumes no liability for damage to them.

The conclusions are based on the site conditions encountered by Stantec at the time the work was performed at the specific testing and/or sampling locations, and conditions may vary among sampling locations. Factors such as areas of potential concern identified in previous studies, site conditions (e.g., utilities) and cost may have constrained the sampling locations used in this assessment.

In addition, analysis has been carried out for only a limited number of chemical parameters, and it should not be inferred that other chemical species are not present. Due to the nature of the investigation and the limited data available, Stantec does not warrant against undiscovered environmental liabilities nor that the sampling results are indicative of the condition of the entire site. As the purpose of this report is to identify site conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the site is beyond the scope of this assessment.

Should additional information become available which differs significantly from our understanding of conditions presented in this report, Stantec specifically disclaims any responsibility to update the conclusions in this report.

This document was prepared by Marissa Lusito, M.Env.Sc., B.Sc.H., and reviewed by Randy Sinukoff, M.A.Sc., P.Eng., QP_{ESA}.

Executive Summary

Stantec Consulting Ltd. (Stantec) was retained by the Township of Uxbridge to conduct a Phase II Environmental Site Assessment (ESA) of the property located at 23 Brock Street West in Uxbridge, Ontario, hereinafter referred to as the "Site". The objective of this program was to assess soil and groundwater quality at the Site with respect to potential environmental concerns that were identified in the Phase I ESA conducted by Stantec (*DRAFT Phase I Environmental Site Assessment, 23 Brock Street West, Uxbridge, Ontario*, dated November 26, 2024).

The Site is in a predominantly residential and commercial neighbourhood of Uxbridge, Ontario and occupies approximately 0.63 hectares (ha) of land. The Site is located on the north side of Brock Street West, approximately 80 metres (m) west of the intersection of Brock Street West and Concession Road 7. At the time of the Phase II ESA, the Site was occupied by a vacant building that was formerly used for commercial purposes, including a commercial autobody shop and gasoline service station. The site building was located on the southern portion of the Site. The Site is bounded by residential and commercial properties to the north and east. The Site is bounded by Toronto Street North to the west and Brock Street West to the south.

The scope of work for the Phase II ESA included the advancement of 13 boreholes (identified as MW1 to MW7, BH8, MW9 to MW10, BH11, MW12, and BH13) to a maximum depth of approximately 12.2 metres below ground surface (m BGS), with ten of the boreholes completed as monitoring wells (identified as MW1 to MW7, MW9 to MW10, and MW12). Soil samples collected as part of the Phase II ESA were submitted for laboratory analysis of volatile organic compounds (VOCs) including benzene, toluene, ethylbenzene, xylenes (BTEX), polycyclic aromatic hydrocarbons (PAHs), metals and other regulated parameters (ORPs) and petroleum hydrocarbon (PHC) fractions 1 to 4 (F1 to F4). Soil samples were also submitted for the analysis of pH and grain size. Groundwater samples were collected from the ten newly installed monitoring wells and submitted for laboratory analysis of VOCs, PAHs, metals and ORPs, and PHC F1 to F4.

The Ontario Regulation (O.Reg.) 153/04 Table 8 Generic site condition standards (SCS) for Use within 30 m of a Water Body in a Potable Groundwater Condition for a residential/parkland/institutional/ industrial/commercial/community property use were considered applicable for the Site (Table 8 SCS).

Based on the elevation survey and depth to groundwater measured on November 5, 2024, the shallow groundwater flow was inferred to be towards the centre of the Site (towards the Uxbridge Brook), likely due to the presence of the culvert beneath the Site. Evidence of light non-aqueous phase liquid (LNAPL) was not measured in the newly installed monitoring wells during the November 5, 2024, monitoring event.

Electrical conductivity (EC) and/or sodium adsorption ratio (SAR) concentrations in soil and sodium and chloride concentrations in groundwater exceeded the Table 8 SCS at various sampling locations across the Site. The EC, SAR, sodium and chloride exceedances are likely attributed to the application of road salt for deicing purposes across the Site and nearby roadways. As per paragraph 1 of section 49.1 of Ontario Regulation 153/04, these parameters are not considered to be contaminants of concern in soil and groundwater if they are present due to the application of salt/de-icing compounds at the Site for the safety of vehicular and pedestrian traffic.

Exceedances of the Table 8 SCS were identified in the soil samples analyzed from across the Site for one of more of VOCs, PHC F1 to F4, metals and ORPs, and PAHs. The soil pH exceeded the applicable range for applying the SCS at one soil sample location. Furthermore, exceedances of the Table 8 SCS were identified in the groundwater samples analyzed from the southern portion of the Site for one or more of metals and ORPs, and PAHs. Fill was identified across the Site up to a maximum depth of 6.8 m BGS (MW2). The presence of fill is a likely contributor to the exceedances of the SCS and elevated pH in the soil and groundwater at the Site.

The source of the PHC exceedances identified in soil from MW6 and MW7 may be associated with the former gasoline service station located on the southern portion of the Site, including gasoline underground storage tanks and a pump island.

The monitoring wells installed on the Site by Stantec can be left in place in the event they may be required for future groundwater monitoring. If the monitoring wells are no longer required, they should be decommissioned according to provincial regulatory requirements.

It is Stantec's understanding that legal proceedings are ongoing regarding geotechnical, hydrogeological, and environmental issues, including the discovery of contaminated soil on the Site, encountered during the Brock Street culvert replacement project undertaken by the Township of Uxbridge in 2018 at the Site to mitigate flooding risk in downtown Uxbridge. Documentation associated with the legal proceedings was not made available to Stantec for review and, as such, the related information is not included in this report.

It is recommended that documentation related to contamination encountered during the Brock Street culvert replacement project be made available for review and interpretation to supplement the information presented in this report subject to Township of Uxbridge legal approval.

The statements made in this Executive Summary text are subject to the limitations included in **Section 5.0** and are to be read in conjunction with the remainder of this report.

Table of Contents

List of Appendices

1 Introduction

1.1 General

Stantec Consulting Ltd. (Stantec) was retained by the Township of Uxbridge to conduct a Phase II Environmental Site Assessment (ESA) of the property located at 23 Brock Street West in Uxbridge, Ontario, hereinafter referred to as the "Site". The general location of the Site is presented on **Figure No.1** in **Appendix A** and the boundaries of the Site and features are presented on **Figure No. 2** in **Appendix A**.

1.2 Background

This Phase II ESA was completed for due diligence purposes. It was completed in accordance with Canadian Standards Association (CSA) standard Z769-00 (R2023) for Phase II ESAs and does not follow the report format consistent with Ontario Regulation (O.Reg.153/04) for a Record of Site Condition (RSC). Should an RSC be required, additional investigation and/or data evaluation/reporting will be needed to meet the requirements of O.Reg.153/04.

The Phase I ESA conducted by Stantec (*DRAFT Phase I Environmental Site Assessment, 23 Brock Street West, Uxbridge, Ontario*, dated November 26, 2024), identified the following environmental concerns at the Site:

- Former underground storage tanks (USTs) and fuel pumps on the southern portion of the Site.
- Former use of the Site as a commercial autobody on the southern portion of the Site.
- Hazardous waste generation at the Site, including the generation of light fuels, petroleum distillates, and oil skimmings and sludges.
- Impacted soil (petroleum hydrocarbons [PHCs], volatile organic compounds [VOCs], and zinc) previously identified across the Site.
- Impacted groundwater (PHCs and ethylbenzene) previously identified on the southern portion of the Site.
- Previous subsurface investigations conducted on the Site indicate that silty clay and silty sand fill was identified across the Site to a maximum depth of 6.6 m below ground surface (BGS).
- A former landfill was located approximately 65 m south of the Site.
- Fuel storage formerly present at 21 Brock Street West (immediately east of the Site).
- A historical dry cleaners present at 16 Brock Street West (30 m southeast of the Site).

Stantec recommended completing a Phase II ESA to assess the above-noted potential environmental concerns.

It is Stantec's understanding that legal proceedings are ongoing regarding geotechnical, hydrogeological, and environmental issues, including the discovery of contaminated soil on the Site, encountered during the Brock Street culvert replacement project undertaken by the Township of Uxbridge in 2018 at the Site to mitigate flooding risk in downtown Uxbridge. Documentation associated with the legal proceedings was not made available to Stantec for review and, as such, the related information is not included in this report.

1.2.1 Site and Surrounding Land Use

The Site is in a predominantly residential and commercial neighbourhood of Uxbridge, Ontario and occupies approximately 0.63 hectares (ha) of land. The Site is located on the north side of Brock Street West, approximately 80 metres (m) west of the intersection of Brock Street West and Concession Road 7. At the time of the Phase II ESA, the Site was occupied by a vacant building that was formerly used for commercial purposes, including a commercial autobody shop and gasoline service station. The site building was located on the southern portion of the Site. The Site is bounded by residential and commercial properties to the north and east. The Site is bounded by Toronto Street North to the west and Brock Street West to the south. The Site details are presented on **Figure No. 2** in **Appendix A**.

1.2.2 Topography and Drainage

The exterior surfaces surrounding the on-site building consist of asphalt parking and driveway areas with some grassed and landscaped areas on the western and northern portions of the Site. Stormwater at the Site flows to on-site catch basins, while excess stormwater likely drains by overland flow to adjacent catch basins located along Toronto Street North or Brock Street West.

Based on an available topographic map (MNRF 2019) reviewed during Stantec's 2024 Phase I ESA and the observed site topography, the inferred regional shallow groundwater flow direction is northerly towards Lake Simcoe, approximately 27 km north of the Site. The Uxbridge Brook is present immediately north and 90 m south of the Site and runs through the central portion of the Site underground in a culvert, running south-north. The local shallow groundwater flow pattern may be influenced by the culvert and other subsurface structures, such as building foundations, weeping tiles, underground utility corridors and trenches and are not always a reflection of regional or local groundwater flow or a replica of the Site or area topography.

Regional topography is indicated on **Figure No. 1** in **Appendix A**. The Site grade generally slopes towards the centre of the Site and to the north.

1.3 Geologic Setting

Based on an available surficial geology map, native surficial soils of the Site consist of sand, gravelly sand and gravel, nearshore and beach deposits. One well record that was available in the ERIS report for the Phase I ESA described wells at the Site. These wells were installed in 2019 and were listed as monitoring/test holes.

Based on an available bedrock geology map, bedrock around the Site consists of shale, limestone, dolostone and/or siltstone belonging to the Georgian Bay Formation, Blue Mountain Formation, Billings Formation, Collingwood Member and/or Eastview Member.

1.4 Regulatory Framework

The roles and powers of the Ministry of the Environment, Conservation and Parks (MECP) when dealing with contaminated sites are outlined primarily in the Environmental Protection Act (R.S.O. 1990). The MECP has a mandate to deal with situations where there is an adverse effect, or the likelihood of an adverse effect, associated with the presence or discharge of a contaminant. O.Reg.153/04 provides guidance and information to property owners and consultants to use when assessing the environmental condition of a property, when determining whether restoration is required and in determining the kind of restoration needed to allow continued use or reuse of a property. *The Soil, Groundwater, and Sediment Standards for Use Under Part XV.I of the Environmental Protection Act* (MOE, 2011b) provide generic numerical Site Condition Standards (SCS) for soil, groundwater, and sediment quality as a function of land use, soil texture (medium and fine or coarse), groundwater usage (potable or non-potable), and remediation approach (full depth or stratified).

The assessment completed for this Site was undertaken following the requirements of the MECP's 2011 *Protocol for Analytical Methods Used in the Assessment of Properties Under Part XV.1 of the Environmental Protection Act* document and generally followed the requirements of O.Reg.153/04, including the use of the SCS to assess soil and groundwater (if encountered) quality. The Phase II ESA program was not completed with the intent of filing a Record of Site Condition; therefore, some requirements of O.Reg.153/04, such as the prescribed report format, were not strictly adhered to.

1.4.1 Generic Soil Quality Standards

This section summarizes the selection process Stantec used to identify the appropriate standards for the Site based on a review of site-specific characteristics consistent with the requirements of O.Reg.153/04. The selection of the applicable SCS considered the following characteristics specific to the Site:

- Groundwater use
- Current/intended property use
- Depth to bedrock
- Proximity to water bodies
- Soil characteristics (e.g., grain size)
- Environmental sensitivity, including:
  - Soil pH
  - Proximity to areas of natural significance

These characteristics were used to determine the applicable soil and groundwater quality standards for use at the Site.

A detailed summary of the selection process for the Site is included in **Appendix B**. Considering the site characteristics described in **Appendix B**, the generic SCS considered applicable for the Site are the Table 8 Generic SCS for Use within 30 m of a Water Body in a Potable Groundwater Condition for a residential/parkland/institutional/industrial/commercial/community property use (Table 8 SCS).

2 Field Program

2.1 Objective

The objective of this program was to assess the soil and groundwater quality at the Site with respect to potential environmental concerns that were identified in Stantec's Phase I ESA report.

2.2 Scope of Work

A summary of the completed scope of work is presented below. A detailed methodology is presented in **Appendix C**.

The Phase II ESA was completed in conjunction with a geotechnical investigation, which will be reported under separate cover. The following activities were completed for this Phase II ESA:

2.2.1 Pre-Field Activities

Pre-field activities completed included the following tasks:

- Prepared a health and safety plan (HASP).
- Retained subcontractors for private underground utility location, borehole drilling and laboratory analytical services.
- Established data quality objectives (DQOs).

2.2.2 Field Activities

Field activities completed at the Site included the following tasks:

- Retained private utility locators (OnSite Locates Inc.) to locate private services in the work areas and requested utility clearances for public utilities (Ontario One Call).
- Retained a drilling contractor (Strata Drilling Group [Strata]) and observed the advancement of 13 boreholes (identified as MW1 to MW7, BH8, MW9 to MW10, BH11, MW12, and BH13) with 10 of the boreholes completed as monitoring wells (identified as MW1 to MW7, MW9 to MW10, and MW12).
- Collected and submitted select soil samples from the boreholes to Bureau Veritas Canada (2019) Inc. (BV) Laboratories for analysis of VOCs (including benzene, toluene, ethylbenzene, and xylenes [BTEX]), polycyclic aromatic hydrocarbons (PAHs), PHC fraction 1 to 4 (F1 to F4), metals, hydride metals, other regulated parameters (ORPs) and grain size.
- Conducted a groundwater monitoring and sampling program at newly installed groundwater monitoring wells.
- Submitted groundwater samples to BV for analysis of VOCs (including BTEX), PHC F1 to F4, PAHs, metals, hydride metals, ORPs.
- Completed an elevation survey at newly installed monitoring well and borehole locations.
- Submitted a composite soil sample to BV for waste characterization analysis.

2.2.3 Data Interpretation and Reporting

Data interpretation and reporting activities completed included the following tasks:

- Interpreted the observations and findings of the field work and the analytical results.
- Evaluated quality assurance/quality control (QA/QC).
- Prepared this report to document the investigation findings.

3 Results

3.1 Stratigraphy

Detailed descriptions of stratigraphy observed during borehole advancement are provided on the borehole records in **Appendix D**. The subsurface profile encountered in the boreholes generally consisted of fill (sand and gravel, silty sand, and/or silty clay with sand) up to 6.8 m BGS (MW2) overlying silt/sandy silt or clay/silty clay to the termination depth of the boreholes (12.0 m BGS [MW2 and MW9]). A layer of peat overlain by fill was observed in BH13 and MW1.

3.2 Soil Headspace Vapour Concentrations

Headspace soil vapour concentrations are a field screening tool to provide a qualitative indication of the presence of volatile Contaminants of Concern (COCs) (i.e., BTEX and PHC F1). There are no regulatory criteria for headspace soil vapour concentrations.

The combustible vapour concentrations (CVC) and total organic vapour (TOV) concentrations measured in the headspace of the soil samples recovered from the boreholes are provided on the borehole logs in **Appendix D**. A hydrocarbon odour was noted in soil sample MW7-4 (2.3 – 2.9 m BGS). No other visual or olfactory indications of subsurface impacts were observed.

The CVC measured in the soil samples collected from the boreholes ranged from less than (<) the detection limits of the instrument (5 parts per million by volume (ppm_v)) at multiple locations to 980 ppm_v at MW7-4 at depths ranging from 2.3 – 2.9 m BGS. Similarly, the TOV measured in the soil samples collected from the boreholes were less than the detection limits of the instrument (0.02 ppm_v) at several soil sample locations to 729 ppm_v at the soil samples identified as at MW7-4 at depths ranging from 2.3 – 2.9 m BGS.

3.3 Groundwater Monitoring

This section presents the results of the groundwater monitoring program, including vapour concentrations measured in the monitoring well headspace, water levels, and interpreted groundwater flow direction. Groundwater monitoring data are presented in **Table I** in **Appendix E**.

Depth to groundwater and headspace CVC and TOV were measured in the newly installed monitoring wells (identified as MW1 to MW7, MW9 to MW10, and MW12) on November 5, 2024.

As shown in **Table I** in **Appendix E**, headspace CVC measured in the monitoring wells ranged from less than the detection limit of the instrument (5 ppm_v) at various locations to 430 ppm_v at MW4. The headspace TOV measured in the monitoring wells ranged from less than the detection limits of the instrument (0.02 ppm_v) at various locations to 25 ppm_v at MW7.

The depth to groundwater ranged from 1.4 m BGS (at MW2) to 3.0 m BGS (at MW1), as shown in **Table I** in **Appendix E.**

Groundwater elevations and the inferred direction of groundwater flow measured on November 5, 2024, are illustrated on **Figure No. 3** in **Appendix A**. Based on the elevation survey and depth to groundwater measured on November 5, 2024, the shallow groundwater flow was inferred to be towards the centre of the Site (towards the Uxbridge Brook).

3.4 Analytical Results

3.4.1 Waste Classification

The results of the waste classification analysis are shown in **Table II** in **Appendix E.** The results indicated that the soil would be classified as a non-hazardous material for waste disposal purposes. Laboratory certificates of analysis are provided in **Appendix F.**

3.4.2 Soil Chemistry

Soil analytical results for samples collected from the boreholes are summarized in **Table III** in **Appendix E** and on **Figures No. 4a** and **4b** in **Appendix A**. Laboratory certificates of analysis are presented in **Appendix F**.

The concentrations/values of parameters analyzed in soil samples during this Phase II ESA were less than the Table 8 SCS except for the following:

- The SAR in the soil samples collected from boreholes MW1-2 (0.8 – 1.4 m BGS), MW2-1 (0 – 0.6 m BGS), MW4-9 (6.1 – 6.9 m BGS), MW6-5 (3.0 – 3.8 m BGS), MW6-8 (5.3 – 6.1 m BGS), MW7-4 and QC-2 (2.3 – 2.9 m BGS), BH8-3 and QC-1 (1.5 – 2.3 m BGS), MW9-6 (3.8 – 4.4 m BGS), BH11-2 (0.8 – 1.5 m BGS), MW12-2 (0.8 – 1.5 m BGS), and BH13-1 and BH13-2 (0 1.4 m BGS).
- Electrical conductivity in the soil samples collected from boreholes MW2-1 (0 – 0.6 m BGS), MW3-4 (2.3 – 3.0 m BGS), MW4-8 and MW4-9 (5.3 – 6.9 m BGS), MW6-5 (3.0 – 3.8 m BGS), MW6-8 (5.3 – 6.1 m BGS), MW7-4 and QC-2 (2.3 – 2.9 m BGS), MW9-6 (3.8 – 4.4 m BGS), MW10-5 (3.0 – 3.7 m BGS), BH11-2 (0.8 – 1.5 m BGS), MW12-2 (0.8 – 1.5 m BGS), BH13-1 and BH13-2 (0 – 1.4 m BGS), BH13-4 (2.3 – 2.9 m BGS), and BH13-6 (3.8 – 4.4 m BGS).
- Various metals (including one of more of the following of antimony, cadmium, chromium, copper, lead, mercury, silver, and/or zinc) in the soil samples collected from boreholes MW4-8 (5.3 – 6.1 m BGS), MW6-5 (3.0 – 3.8 m BGS), MW6-8 (5.3 – 6.1 m BGS), and BH13-4 to BH13-6 (2.3 – 4.4 m BGS).
- Xylenes in the soil samples collected from boreholes MW1-2 (0.8 – 1.4 m BGS), MW2-1 (0 – 0.6 m BGS), MW4-9 (6.1 – 6.9 m BGS), MW6-5 (3.0 – 3.8 m BGS), and MW9-5 (3.0 – 3.8 m BGS).
- PHC F1 in the soil samples collected from boreholes MW6-5 (3.0 – 3.8 m BGS), and MW7-4 and QC-2 (2.3 – 2.9 m BGS).

- PHC F2 in the soil samples collected from boreholes MW6-5 (3.0 – 3.8 m BGS), MW7-4 and QC-2 (2.3 – 2.9 m BGS), MW9-5 (3.0 – 3.8 m BGS), and MW9-13 (10.7 – 11.3 m BGS).
- PHC F3 in the soil samples collected from boreholes MW7-4 and QC-2 (2.3 – 2.9 m BGS), MW9-5 (3.0 – 3.8 m BGS), BH11-6 (3.8 – 4.6 m BGS), BH11-8 (5.3 – 6.1 m BGS), BH13-3 (1.5 – 2.1 m BGS), BH13-4 (2.3 – 2.9 m BGS), and BH13-7 (4.6 – 5.2 m BGS).
- PHC F4 in the soil samples collected from boreholes MW7-4 and QC-2 (2.3 – 2.9 m BGS), BH11-6 (3.8 – 4.6 m BGS), BH13-3 to BH13-5 (1.5 – 3.8 m BGS), and BH13-7 (4.6 – 5.2 m BGS).
- PHC F4 Gravimetric in the soil samples collected from boreholes MW7-4 and QC-2 (2.3 – 2.9 m BGS), BH13-3 (1.5 – 2.1 m BGS), BH13-4 (2.3 – 2.9 m BGS), and BH13-7 (4.6 – 5.2 m BGS).
- Mercury in the soil sample collected from MW9-6 (3.8 – 4.4 m BGS).
- Antimony in the soil sample collected from MW8-3 and QC-1 (1.5 – 2.3 m BGS).
- Ethylbenzene in soil sample collected from MW6-5 (3.0 – 3.8 m BGS).
- Various PAHs (acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b/j)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenzo(a,h)anthracene, fluoranthene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene) in the soil sample collected from MW8-3 and QC-1 (1.5 – 2.3 m BGS).
- Benzo(a)pyrene in the soil sample collected from MW7-4 and QC-2 (2.3 – 2.9 m BGS).
- Indeno(1,2,3-cd)pyrene in the soil sample collected from QC-2 (2.3 – 2.9 m BGS).
- Acetone in the soil sample collected from borehole MW4-8 (5.3 – 6.1 m BGS).
- Hexane in the soil sample collected from borehole MW6-5 (3.0 – 3.8 m BGS).

The analysis for pH was conducted on 28 soil samples, including seven soil samples recovered from the surface (<1.5 m depth) and 21 soil samples recovered from the subsurface (> 1.5 m depth). The results are presented on **Table III** in **Appendix E**. The corresponding certificates of analysis from BV Labs are presented in **Appendix F**. The pH values of soil samples analyzed were within the acceptable range for surface and/or subsurface soil as outlined in O.Reg. 153/04, with the exception of one soil sample from MW3-4 (2.3 – 3.0 m BGS).

Grain size analysis was conducted on two soil samples (identified as MW2-2 [0.8 – 1.4 m BGS], and BH13-2 [0.8 – 1.4 m BGS]) recovered from the fill at the Site. For these samples, 19% and 48% of the particles were less than 75 micrometers (µm) in diameter. Based on the results, the SCS for a coarse-textured soil were applicable, as outlined in O.Reg. 153/04 and as presented on **Table III** in **Appendix E**. The corresponding certificates of analysis from BV Labs are presented in **Appendix F**.

3.4.3 Groundwater Chemistry

Groundwater analytical results are summarized in **Table IV** in **Appendix E** and on **Figure No. 5** in **Appendix A**. Laboratory certificates of analysis are provided in **Appendix F**.

The concentrations of parameters analyzed in groundwater samples during this Phase II ESA were less than the Table 8 SCS except for the following:

- Chloride in the groundwater samples collected from monitoring wells MW1, MW2, MW4, MW6, MW7, and MW10.
- Sodium in the groundwater samples collected from monitoring wells MW2, MW4, MW6, MW7, and MW10.
- Benzo(a)pyrene in the groundwater samples collected from monitoring wells MW4, MW5, and MW6.
- Cobalt in the groundwater samples collected from monitoring wells MW5 and MW7.
- Barium in the groundwater sample collected from monitoring well MW7.

3.5 Quality Assurance / Quality Control

Stantec implemented the following quality assurance/quality control (QA/QC) program to promote the acquisition of soil data that were accurate and representative of conditions at the Site. This program consisted of, but was not limited to, the elements listed below:

- Proper containment, preservation, handling, and transport of soil samples.
- Use of an accredited laboratory.
- Use of reporting limits appropriate for the required soil analyses for comparison to the applicable SCS for the Site.

For sampling efforts, Stantec implemented the following elements for QA/QC:

- Project staff were properly trained and equipped to undertake the tasks involved in the project.
- Field equipment was in good working order and properly calibrated.
- Performance of sampling procedures and field activities was properly documented.
- Field and analytical data were evaluated and interpreted by the project scientific and management teams.
- Independent checks of scientific calculations, figures, and tables were conducted.
- Field duplicate soil samples were analyzed.
- The relative percent difference (RPD) for the sample duplicate pairs was calculated to assess the precision of the sampling and analytical procedures.
- Laboratory QA/QC results, including laboratory replicate analyses and surrogate standard recoveries, were reviewed.

The data quality objective (DQO) for the soil analytical program was to provide data that were reproducible and of a suitable quality for comparison with the applicable regulatory SCS.

As a check on the laboratory analytical methods and on sample precision, the following QC samples were submitted:

- One blind field duplicate soil sample (identified as QC-1 [parent sample BH8-3]) submitted for analysis of PAHs, metals, and ORPs.
- One blind field duplicate soil sample (identified as QC-2 [parent sample MW7-4]) submitted for analysis of VOCs, PHCs, PAHs, metals, and ORPs.
- One blind field duplicate soil sample (identified as QC-3 [parent sample MW5-5]) submitted for analysis of VOCs and PHCs.
- One blind field duplicate groundwater sample (identified as QC-01 [MW4]) submitted for analysis of VOCs, PHCs, PAHs, metals, and ORPs.
- One field blank groundwater sample (identified as QC-02) was submitted for analysis of VOCs, and PHCs.
- One trip blank groundwater sample (identified as TRIP BLANK) was submitted for analysis of VOCs, and PHCs.

The blind field duplicate samples were used to assess the precision of the sampling and analytical procedures. Typically, the RPD is calculated for the concentrations in the original sample and its duplicate. The RPD was calculated using the following formula:

$$RPD = \left| \frac{C_1 - C_2}{(C_1 + C_2)/2} \right| \times 100$$

Where: C1 is the concentration in the original sample; and
C2 is the concentration in the sample duplicate.

If the results for either or both the original sample and the duplicate were less than the laboratory RLs, the RPD was not calculated. RPDs were only calculated if the analytical result was greater than five times the RL.

3.5.1 Blind Duplicate Samples

The analytical results for the field duplicate soil samples and the calculated RPDs are presented on **Table III** in **Appendix E**.

Soil

The RPDs, where calculated, ranged between 0% and 34%. RPDs exceeding the quality objective of 30% were calculated for the following samples:

- BH8-3 and QC-1 – Acenaphthylene; RPD of 34%
- BH8-3 and QC-1 – Benzo(a)pyrene; RPD of 33%
- BH8-3 and QC-1 – Benzo(b/j)fluoranthene; RPD of 34%
- BH8-3 and QC-1 – Dibenzo(a,h)anthracene; RPD of 31%
- BH8-3 and QC-1 – Indeno(1,2,3-cd)pyrene; RPD of 33%

- BH7-4 and QC-2 – PHC F4; RPD of 34%

The exceedance of the quality objective of 30% at BH8-3 and its duplicate sample QC-1 and at BH7-4 and its duplicate sample QC-2 is likely due to soil heterogeneities. Since both the parent and duplicate samples at both locations were above the applicable SCS for one or more parameter, the exceedance of the quality objective of 30% has no material impact on the interpretation of the results.

Groundwater

The RPDs, where calculated, were between 0% and 7% and within the acceptable quality objective of 30%.

3.5.2 Laboratory QA/QC

In addition to Stantec's assessment of blind field duplicate samples, BV Labs followed internal QA/QC protocols, which included laboratory replicates, process blanks, process recovery and matrix spike analyses.

BV Labs reported that the results of their QA/QC procedures were within their applicable limits and met their overall QA/QC acceptability criteria, with the following exceptions:

BV Job #C4Y8641

- The recovery for the extraction surrogate compound was above the upper control limit for soil sample MW4-8 (5.3 – 6.1 m BGS) and MW4-9 (6.1 – 6.9 m BGS).
- The detection limit was raised due to matrix interference for ethylbenzene in soil sample QC-2.
- The detection limit was raised due to matrix interference for chromium VI in soil sample BH13-7 (4.6 – 5.2 m BGS).

BV Job #C4Z1246

- Due to the sample matrix, sample required dilution. Detection limits were adjusted accordingly for chromium VI in groundwater samples MW2, MW6, MW7, and MW10. Detection limits were adjusted accordingly for phenanthrene in groundwater sample MW9 and chloroform in MW2.

These QA/QC items are not anticipated to affect the interpretation of the analytical results.

3.5.3 QA/QC Conclusions

Based on the QA/QC evaluation, it was concluded that the DQO for this assessment was satisfied, and the data were considered acceptable for use in this report.

4 Summary and Discussion

Stantec Consulting Ltd. (Stantec) was retained by the Township of Uxbridge to conduct a Phase II Environmental Site Assessment (ESA) for the property municipally described as 23 Brock Street West in Uxbridge, Ontario. The objective of this program was to assess the soil and groundwater quality at the Site with respect to the potential environmental concerns that were identified in Stantec's Phase I ESA report.

Thirteen boreholes (identified as MW1 to MW7, BH8, MW9 to MW10, BH11, MW12, and BH13) were advanced to depths ranging from 6.1 m BGS (various) to 12.2 m BGS (MW2). Ten of the 13 boreholes were completed as monitoring wells (identified as MW1 to MW7, MW9 to MW10, and MW12).

The Table 8 SCS for Use within 30 m of a Water Body in a Potable Groundwater Condition for a residential/parkland/institutional/industrial/commercial/community property use were determined to apply for the comparison of soil and groundwater data from the Site.

Based on the elevation survey and depth to groundwater measured on November 5, 2024, the shallow groundwater flow was inferred to be towards the centre of the Site (towards the Uxbridge Brook), likely due to the presence of the culvert beneath the Site. Evidence of light non-aqueous phase liquid (LNAPL) was not identified in the newly installed monitoring wells during the November 5, 2024, monitoring event.

Electrical conductivity (EC) and/or sodium adsorption ratio (SAR) concentrations in soil and sodium and chloride concentrations in groundwater exceeded the Table 8 SCS at various sampling locations across the Site. The EC, SAR, sodium and chloride exceedances are likely attributed to the application of road salt for deicing purposes across the Site and nearby roadways. As per paragraph 1 of section 49.1 of Ontario Regulation 153/04, these parameters are not considered to be contaminants of concern in soil and groundwater if they are present due to the application of salt/de-icing compounds at the Site for the safety of vehicular and pedestrian traffic.

Exceedances of the Table 8 SCS were identified in the soil samples analyzed from across the Site for one or more of VOCs, PHC F1 to F4, metals and ORPs, and PAHs. One location also exceeded the applicable pH range for applying the SCS. Furthermore, exceedances of the Table 8 SCS were identified in the groundwater samples analyzed from the southern portion of the Site for one or more of metals and ORPs, and PAHs. Fill was identified across the Site up to a maximum depth of 6.8 m BGS (MW2). The presence of fill is a likely contributor to exceedances of the SCS and elevated pH in the soil and groundwater at the Site.

The source of the PHC exceedances identified in soil from MW6 and MW7 may be associated with the former gasoline service station located on the southern portion of the Site, including gasoline underground storage tanks and a pump island.

It is Stantec's understanding that legal proceedings are ongoing regarding geotechnical, hydrogeological, and environmental issues, including the discovery of contaminated soil on the Site, encountered during the Brock Street culvert replacement project undertaken by the Township of Uxbridge in 2018 at the Site to mitigate flooding risk in downtown Uxbridge. Documentation associated with the legal proceedings was not made available to Stantec for review and, as such, the related information is not included in this report.

5 Recommendations

Based on the conclusions of the current investigation of the Site, Stantec provides the following recommendations:

- The monitoring wells installed on the Site by Stantec can be left in place in the event they may be required for future groundwater monitoring. If the monitoring wells are no longer required, they should be decommissioned according to provincial regulatory requirements.
- It is recommended that documentation related to contamination encountered during the Brock Street culvert replacement project be made available for review and interpretation to supplement the information presented in this report subject to Township of Uxbridge legal approval.

Title
Groundwater Analytical Results- Sodium and Chloride

Appendix B Generic Soil and Groundwater Quality Standard Selection Process

This section summarizes the selection process Stantec used to identify the appropriate SCS for the Site. The selection was based on a review of site-specific characteristics consistent with the requirements of O.Reg.153/04 and considered the following characteristics specific to the Site.

B.1 Groundwater Use

The Site obtains its drinking water from the Region of Durham's municipal distribution system, however, it was reported on the Region of Durham's website that the sources of potable water in the Township of Uxbridge included Lake Simcoe and a groundwater well. Therefore, SCS for potable groundwater conditions were considered applicable at the Site.

B.2 Current/Intended Property Use

Stantec understands that the Site is currently vacant and has been used for commercial purposes. Therefore, the applicable land use category was residential/parkland/institutional/industrial/commercial/community.

B.3 Depth to Bedrock

The subsurface investigation completed as part of this Phase II ESA did not identify bedrock within 2 m of the existing ground surface. Therefore, the full depth generic SCS were considered applicable for use at the Site.

B.4 Proximity to Water Bodies

The Uxbridge Brook is present immediately north and 90 m south of the Site and runs through the central portion of the Site underground in a culvert, running south-north. Therefore, the generic SCS suitable for properties within 30 m of a water body were considered applicable for the Site.

B.5 Soil Characteristics

Stratigraphy observed in the boreholes advanced as part of this Phase II ESA consisted of fill (sand and gravel, silty sand, and/or silty clay with sand) overlying silt/sandy silt or clay/silty clay. Three soil samples were submitted for grain size analysis as part of the Phase II ESA. The results of the grain size analyses indicated the majority of the material at the Site to be coarse-grained material, therefore, the coarse-grained standards were applied.

B.6 Environmentally Sensitive Areas

The O.Reg.153/04 generic SCS cannot be used at properties that are within, include, or are proximate to (i.e., within 30 m of) Environmentally Sensitive Areas, such as areas of natural significance, or when soil pH is not within the allowable ranges for surface and/or subsurface soils. If either condition applies, the Table 1 (background) SCS are used to evaluate soil and groundwater quality.

Stantec searched the Ontario Ministry of Natural Resources and Forestry's (MNRF's) Natural Heritage online database. No areas of natural or scientific interest (ANSIs) or natural heritage areas were identified within 1 km of the Site.

The generic SCS cannot be applied to a property if the soil pH has a value outside a range of 5 to 9 for surface soil (less than 1.5 m BGS) or outside a range of 5 to 11 for subsurface soil (greater than 1.5 m BGS).

The soil sampling completed as part of this Phase II ESA confirmed that the pH in soil at the Site was within the acceptable range (between 5 and 9 for surface soil, and 5 and 11 for soil at depths greater than 1.5 m from the ground surface) for 27 of the 28 pH samples analyzed, and therefore, the Site would not be considered environmentally sensitive as per the definitions provided in Section 41 of O.Reg.153/04.

Based on the above results, the Site was therefore not considered to be environmentally sensitive.

B.7 Applicable Standards

Based on the Site's characteristics, the Table 8 Generic SCS for Use within 30 m of a Water Body in a Potable Groundwater Condition for a residential/parkland/institutional/industrial/commercial/community property use were considered applicable for the Site (Table 8 SCS).

Appendix C Methodology

C.1 Health and Safety

Stantec developed a Health and Safety Plan (HASP) for this project consistent with the requirements of the Ontario *Occupational Health and Safety Act* (OHSA) to address the fieldwork components, including sampling and handling of soil and groundwater samples potentially containing the contaminants of potential concern (COPC) previously identified. The specific objectives of the health and safety checklist were to:

- Identify potential health and safety concerns or exposure risks associated with activities to be conducted on the Site.
- Identify and describe the control methods designed to reduce on-site worker exposure to potential risks.
- Reduce the potential for on-site workers and the public to be exposed to unnecessary or unacceptable risk as part of the work program.
- Undertake the proposed Phase II ESA program field activities in a manner consistent with the applicable legislation and guidelines respecting worker health and safety, and regulations concerning contaminant and waste handling.

A copy of the health and safety documentation was kept on the Site by Stantec field personnel for the duration of the field activities.

C.2 Underground Utilities

C.2.1 Public and Private Underground Service Locates

Prior to the borehole drilling activities, Stantec contacted Ontario One Call to have publicly owned utilities located in the vicinity of the proposed borehole locations. In addition, Stantec retained OnSite Locates Inc. of Markham, Ontario to locate public and private underground services near the boreholes including, but not limited to, buried former private Site services, telephone, natural gas, cable, water, and power.

C.3 Methodology

C.3.1 Borehole Advancement and Monitoring Well Installation

Between October 28 and November 4, 2024, Strata advanced 13 boreholes (identified as MW1 to MW7, BH8, MW9 to MW10, BH11, MW12, and BH13) at various locations across the Site to depths ranging from 6.1 m BGS (various locations) to 12.2 m BGS (MW2). The locations of the boreholes are presented on **Figure No. 2** in **Appendix A**. To facilitate future groundwater monitoring and sampling activities at the Site, ten of the 13 boreholes (identified as MW1 to MW7, MW9 to MW10, and MW12) were completed as monitoring wells.

Stantec personnel logged the subsurface conditions encountered within each of the boreholes at the time of the field work. Samples from the soils within the boreholes were recovered at regular depth intervals (i.e., every 1.2 m) in disposable polyethylene liners.

Groundwater monitoring wells were constructed of 50 mm inside diameter (ID) polyvinyl chloride (PVC) well materials. Monitoring wells were constructed with a 3.0 m long slotted PVC well screen connected to an appropriate length of PVC riser pipe. The PVC screen and riser pipe were flush-threaded and equipped with O-rings to provide watertight joints. A flush-threaded PVC cap was installed at the bottom of the well screen. Silica sand was placed in the borehole annulus around each well screen and extended to approximately 0.3 m above the top of the well screen. A bentonite seal was installed from the top of the silica sand to approximate depths of 0.15 m BGS in each of the monitoring wells. A j-plug was installed at the top of each monitoring well. The monitoring wells were finished with flush mounted well casings that were concreted in-place.

Borehole logs in **Appendix D** present the monitoring well construction details.

C.4 Elevation Survey

The ground surface elevations of the boreholes and the top of monitoring well casings were surveyed using a Sokkia GCX3 Global Network Satellite System (GNSS) Receiver to provide an accurate elevation in meters above sea level (m ASL). This permitted an assessment of relative ground water elevations between monitoring wells across the Site.

C.5 Sampling Methods

C.5.1 Soil Sampling Methodology

Soil samples were collected from the boreholes at regular intervals. Stantec's field technician visually assessed and logged the recovered soil samples in the field and recorded observations of colour, odour, texture, soil type, and moisture. Borehole logs are provided in **Appendix D**. Each soil sample was split into two portions. One portion was placed into a sealable plastic bag for use in screening headspace soil vapour concentrations. The second portion of each sample was placed into laboratory-supplied jars and temporarily stored in a cooler on ice prior to transport to Bureau Veritas Canada (2019) Inc. (BV) Laboratories. Samples to be analyzed for volatile organic compounds (VOC) or petroleum hydrocarbons (PHC) including benzene, toluene, ethylbenzene and xylenes (BTEX) and PHC F1 were recovered at each sampling interval using a hermetic sampling device. This involved collecting approximately 5 gram aliquots of soil and extruding the aliquots directly into laboratory supplied vials containing methanol preservative.

Stantec screened soil samples for headspace soil vapour concentrations in the field using an RKI Eagle 2 gas detector. The Eagle 2 is equipped with a combustible gas detector to measure combustible vapour concentrations (CVC) and a photoionization detector (PID) to measure total organic vapours (TOV). The combustible gas detector was calibrated to hexane and operated in methane elimination mode for CVC measurements, and the PID was calibrated to isobutylene and equipped with a 10.6 eV lamp for TOV measurements. For CVC, the Eagle 2 can display measurement in parts per million by volume (ppm_v), percent by volume (% volume), and percent of the lower explosive limit (% LEL). TOV measurements are reported in units of ppm_v.

The Eagle 2 is equipped with a Teflon® lined hose and a 0.4 m (10 in.) long hydrophobic probe. The probe includes a replaceable hydrophobic filter disk that reduces the potential for particulates and water to enter the instrument. The Eagle 2 was calibrated in the field at the beginning of work each day. Field screening methods measure the total concentration of a range of combustible and volatile contaminants such as PHC and VOC in soil vapour. Borehole logs in **Appendix D** include CVC/TOV measurements.

Stantec selected soil samples for laboratory analysis based on a variety of lines of evidence, including samples with elevated CVC/TOV concentrations, staining, odour, and the expected behaviour of contaminants of potential concern (COPCs) in the environment. Samples submitted for laboratory analysis were packed in coolers on ice and shipped to BV under chain-of-custody documentation

C.5.2 Geoprobe Decontamination Methodology

Potential cross-contamination of samples was reduced by using cleaned drilling and sampling equipment. Loose soil was brushed from the stainless-steel drive casings between sampling locations and the non-dedicated sampling equipment from the drill rig was washed using a solution of Alconox and water and rinsed with water between sample locations. Stantec's field technicians wore a new pair of disposable nitrile gloves for each soil sample.

C.5.3 Groundwater Monitoring and Sampling

Headspace CVC and TOV in the monitoring wells were measured using an RKI Eagle 2, which was calibrated in accordance with the methodology described above.

Stantec measured the depth to ground water and assessed the presence/absence of light and dense non-aqueous phase liquids (LNAPL and DNAPL) with a Heron Model H.Oil oil/water interface probe (or equivalent). The sensor accuracy is 1 mm (1/200 ft).

Prior to sampling, Stantec developed and purged the newly installed monitoring wells using dedicated Waterra® tubing and foot valves. The monitoring wells were allowed to recover to approximately 90% of static elevation prior to sample collection.

Groundwater samples were recovered from the newly installed monitoring wells and existing monitoring wells in accordance with the United States Environmental Protection Agency's (USEPA's) recommended "low-flow" sampling methodology, as outlined in the USEPA publication EPA/540/S095-504 Low-Flow (Minimal Drawdown) Ground-Water Sampling Procedures, April 1996.

Low flow refers to the velocity at which water enters the pump intake, which directly affects the flow of formation pore water in the immediate vicinity of the well screen. Water level drawdown provides the best indication of the stress imparted by a given flowrate for a given hydrological situation. The objective is to pump in a manner that reduces stress (drawdown) to the system to the extent practicable, taking into account established data quality objectives.

A peristaltic pump was placed gently into the water column of each monitoring well and the pump intake was positioned in the middle of, or slightly above the middle of the screened interval. The pump was set at a flow rate on the order of 0.2 L to 0.4 L/minute.

Water quality indicator parameters were measured using the YSI-556 MPS. In addition, the water level in the monitoring well was checked periodically to monitor the drawdown in the well as a guide to flow rate adjustment. The goal was minimal drawdown (<0.1 m) during purging. Stabilization was considered to be achieved after all parameters had stabilized for three successive readings. Once the water quality parameters had stabilized and it was confirmed that the drawdown was less than 0.1 m, ground water sampling was initiated. The ground water samples were collected by direct transfer, without agitation, from the dedicated polyethylene tubing on the pump into a clean sampling container.

The VOC sample vials were filled so that the water formed a convex meniscus at the top of the vial, resulting in little to no air space in the vial. The vial was turned over and tapped to check for bubbles in the vial, which would indicate air space is present. If gas bubbles were observed in the sample vial, the procedure was repeated until no gas bubbles appeared. All other sample bottles were filled so that minimal head space was left in the bottle. Sufficient water volumes were available to fill the recommended bottles, as required by the laboratory. The J plug on each well was replaced at the end of the sampling event.

Stantec's field technicians wore a new pair of disposable nitrile gloves at each monitoring well location. Non dedicated monitoring equipment (e.g., interface probe, water quality instruments) was decontaminated using a solution of Alconox detergent and tap water and rinsed with distilled water between each well. Dedicated sampling equipment (waterra tubing, foot valves, bailers, string, etc.) was used for each monitoring well.

C.6 Laboratory Analyses

C.6.1 Soil Analytical Program

Soil samples were recovered from each of the completed boreholes and submitted to BV Labs for analysis of VOCs, PHCs F1 to F4, PAHs, metals and other regulated parameters, pH, and grain size.

C.6.2 Groundwater Analytical Program

Groundwater samples were recovered from each of the ten completed monitoring wells and submitted to BV Labs for analysis of VOCs, PHCs F1 to F4, PAHs, and metals and other regulated parameters.

	12											
40												

Notes:
m AMSL - metres above mean sea level
m BGS - metres below ground surface
SS - split-spoon sample
ppm - parts per million by volume
%LEL - percent lower explosive limit
n/a - not available

BTEX - benzene, toluene, ethylbenzene, xylenes
PHC F1-F4 - petroleum hydrocarbon fractions 1 to 4
VOC - volatile organic compounds
EC - electrical conductivity
SAR - sodium adsorption ratio
PAH - polycyclic aromatic hydrocarbons

Table III
Summary of Soil Analytical Results
Phase II Environmental Site Assessment
23 Brock Street West, Uxbridge, Ontario
Township of Uxbridge

Notes:

Ontario SCS Soil, Ground Water and Sediment Standards for Use under Part XV I of the Environmental Protection Act (MOE 2011) Site Condition Standards (SCS)

A	Table 8 - Residential / Parkland / Institutional / Industrial / Commercial / Community Property Use
6.6[2]	Concentration exceeds the indicated standard
15.2	Measured concentration did not exceed the indicated standard
<0.50	Laboratory reporting limit was greater than the applicable standard
<0.03	Analyte was not detected at a concentration greater than the laboratory reporting limit
n/v	No standard/guideline value
-	Parameter not analyzed / not available
s1	Standard is applicable to total xylenes, and m & p-xylenes and o-xylenes should be summed for comparison
s2	Standard is for benzo(a)fluoranthene, however, the analytical laboratory can not distinguish between benzo(j)fluoranthene and benzo(k)fluoranthene, and therefore, the result is a combination of the two isomers, against which the standard has been compared
s3	Standard is applicable to both 1-methylnaphthalene and 2-methylnaphthalene, with the provision that if both are detected the sum of the two must not exceed the standard
s7	Standard is applicable to PHC in the F1 range minus BTEX
s8	Standard is applicable to PHC in the F3 range, minus PAHs (other than naphthalene). If PAHs were not analyzed, the standard is applied to F3
s10	If baseline is not reached during F4 analysis, then gravimetric analysis is to be performed, and the standard is applied to the higher of the two results
s11	Standard is applicable to 1,3-Dichloropropene, and the individual isomers (cis + trans) should be added for comparison
s12	The criteria for pH in surface soils (0 to 1.5 m) is 5 - 9, whereas the criteria for pH in sub-surface soils (> 1.5 m depth) is 5 - 11
s15	Standard is applicable to PHC in the F2 range minus naphthalene. If naphthalene was not analyzed, the standard is applied to F2
s16	For surface soil, the boron standard is for hot water soluble extract. For subsurface soil, the standard is for total boron (mixed strong acid digest), as ecological criteria are not considered
HM	Detection limit raised due to high moisture content
MI	Detection limits raised due to matrix interference
RPD	Relative Percent Difference
61%	RPD exceeds data quality objective of 30%
nc	RPD is not calculated if one or more values is non detect or if one or more values is less than five times the reportable detection limit

Table IV
Summary of Groundwater Analytical Results
Phase II Environmental Site Assessment
23 Brock Street West, Uxbridge, Ontario
Township of Uxbridge

Notes:

Ontario SCS	Soil, Ground Water and Sediment Standards for Use under Part XV.I of the Environmental Protection Act (MOE, 2011) Site Condition Standards (SCS)
A	Table 8 - All Types of Property Use
6.8^	Concentration exceeds the indicated standard
13.2	Measured concentration did not exceed the indicated standard
<0.50	Laboratory reporting limit was greater than the applicable standard
<0.03	Analyte was not detected at a concentration greater than the laboratory reporting limit
n/v	No standard/guideline value
-	Parameter not analyzed / not available
x1	Standard is applicable to total xylenes, and m & p-xylenes and o-xylenes should be summed for comparison
x2	Standard is for benzo(b)fluoranthene, however, the analytical laboratory can not distinguish between benzo(b)fluoranthene and benzo(j)fluoranthene, and therefore, the result is a combination of the two isomers, against which the sum is compared
x3	Standard is applicable to both 1-methylnaphthalene and 2-methylnaphthalene, with the provision that if both are detected the sum of the two must not exceed the standard
x7	Standard is applicable to PHC in the F1 range minus BTEX
x8	Standard is applicable to PHC in the F3 range, minus PAHs (other than naphthalene). If PAHs were not analyzed, the standard is applied to F3
x10	If baseline is not reached during F4 analysis, then gravimetric analysis is to be performed, and the standard is applied to the higher of the two results.
x11	Standard is applicable to 1,3-Dichloropropene, and the individual isomers (cis + trans) should be added for comparison
x15	Standard is applicable to PHC in the F2 range minus naphthalene. If naphthalene was not analyzed, the standard is applied to F2
DB	Due to the sample matrix, sample required dilution. Detection limit was adjusted accordingly
MI	Detection limits raised due to matrix interference
RPD	Relative Percent Difference
61%	RPD exceeds data quality objective of 30%
nc	RPD is not calculated if one or more values is non detect or if one or more values is less than five times the reportable detection limit.

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, EPA, APHA or the Quebec Ministry of Environment.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Soils are reported on a dry weight basis unless otherwise specified.
(2) No lab extraction date is given for F1BTEX & VOC samples that are field preserved with methanol. Extraction date is the date sampled unless otherwise stated.
(3) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Bureau Veritas has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation, please refer to the Validation Signatures page if included, otherwise available by request. For Department specific Analyst/Supervisor validation names, please refer to the Test Summary section if included, otherwise available by request. This report is authorized by Rodney Major, General Manager responsible for Ontario Environmental laboratory operations.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	5.7°C
Package 2	6.7°C
Package 3	5.0°C

Revised Report [2024/11/25]: Additional analysis requested

Sample AHVP81 [MW1-2] : PAH Analysis: Due to the sample matrix, sample required dilution. Detection limit was adjusted accordingly.

Sample AHVP87 [BH8-5] : VOC/F1 Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample AHVP88 [MW9-5] : F1/BTEX Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample AHVP90 [MW9-13] : VOC/F1 Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample AHVQ14 [BH8-2] : PAH Analysis: Due to the sample matrix, sample required dilution. Detection limits were adjusted accordingly.

Sample AHVQ18 [BH8-8] : PAH Analysis: Detection limits were adjusted for high moisture content.

Sample AHVQ26 [MW9-10] : F1/BTEX Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Results relate only to the items tested.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) The recovery was above the upper control limit. This may represent a high bias in some results for this specific analyte. For results that were not detected (ND), this potential bias has no impact.

(2) The matrix spike recovery was below the lower control limit. This may be due in part to the reducing environment of the sample. The sample was reanalyzed with the same results.

MOE REGULATED DRINKING WATER OR WATER INTENDED FOR HUMAN CONSUMPTION MUST BE SUBMITTED ON THE BUREAU VERITAS DRINKING WATER CHAIN OF CUSTODY

Regulation 153 (2011): ☐ Table 1 ☐ Res/Park ☐ Medium/Fine ☑ Table 2 ☐ Ind/Comm ☑ Coarse ☐ Table 3 ☐ Agri/Other ☐ For RSC ☐ Table ___

Other Regulations: ☐ CCME ☐ Sanitary Sewer Bylaw ☐ Reg 558 ☐ Storm Sewer Bylaw ☐ MISA Municipality ___ ☐ PWQO ☐ Reg 406 Table ___ ☐ Other ___

Special Instructions

Include Criteria on Certificate of Analysis (Y/N)? N

Field Filtered (please circle): Metals / Hg / Cr VI

ANALYSIS REQUESTED (PLEASE BE SPECIFIC):
- O.Reg 153 PAHs (Soil)
- O.Reg 153 VOCs by HS & F1-F4 (Soil)
- O.Reg 153 Metals & Inorganics Pkg (Soil)
- Sieve 75um
- O.Reg 558 TCLP Benzo(a)pyrene
- O.Reg 555 TCLP VOCs by HS
- O.Reg 558 TCLP Inorganics Package
- TCLP Leachate Preparation
- Ignitability of a Sample
- Polychlorinated Biphenyls in Soil

Turnaround Time (TAT) Required:
Please provide advance notice for rush projects
Regular (Standard) TAT: ☑
(will be applied if Rush TAT is not specified):
Standard TAT = 5-7 Working days for most tests.
Please note: Standard TAT for certain tests such as BOD and Dioxins/Furans are > 5 days - contact your Project Manager for details.
Job Specific Rush TAT (if applies to entire submission)
Date Required: ___ Time Required: ___ ☐
Rush Confirmation Number: ___
(call lab for #)

CERTIFICATE OF ANALYSIS – REVISED REPORT

BUREAU VERITAS JOB #: C4Y8641
Received: 2024/11/05, 15:20

reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Soils are reported on a dry weight basis unless otherwise specified.
(2) No lab extraction date is given for F1BTEX & VOC samples that are field preserved with methanol. Extraction date is the date sampled unless otherwise stated.
(3) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

==========

Bureau Veritas has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation, please refer to the Validation Signatures page if included, otherwise available by request. For Department specific Analyst/Supervisor validation names, please refer to the Test Summary section if included, otherwise available by request. This report is authorized by Rodney Major, General Manager responsible for Ontario Environmental laboratory operations.

(1) The recovery for the extraction surrogate compound was above the upper control limit for the analysis of the soil sample. Visible loss of methanol was observed in this sample, with abnormally low soil weight calculated . As a result, there is an increased level of uncertainty associated with the values reported for this sample.

RDL = Reportable Detection Limit
QC Batch = Quality Control Batch
(1) The recovery for the extraction surrogate compound was above the upper control limit for duplicate analyses of the soil sample. Visible loss of methanol was observed in this sample. As a result, there is an increased level of uncertainty associated with the values reported for this sample.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	4.0°C
Package 2	3.7°C
Package 3	7.7°C

Revised Report [2024/11/25]: Additional analysis requested.

F1/BTEX Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

F1/BTEX Analysis: Analysis was performed past the sample holding time. This may increase the variability associated with these results.

F24 Analysis: Analysis was performed past the sample holding time. This may increase the variability associated with these results.

Sample AHZR55 [MW3-5] : VOC/F1 Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample AHZR56 [MW4-8] : PAH Analysis: Detection limits were adjusted for high moisture content.

Hexavalent Chromium: Detection Limits were raised due to high moisture content.

Sample AHZR56 [MW4-8] : VOC/F1 Analysis: Detection limits were raised due to high moisture content and/or low weight of soil provided.

Sample AHZR58 [MW7-4] : PAH Analysis: Due to the sample matrix, sample required dilution. Detections limit were adjusted accordingly.

VOC/F1 Analysis: Due to a level of petroleum hydrocarbon compounds beyond the appropriate range, the sample required dilution. The detection limits were adjusted accordingly. In order to meet required regulatory criteria, results for selected compounds (obtained by a separate analysis using an appropriate low dilution) are included in the report.

Sample AHZR58 [MW7-4] : VOC/F1 Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample AHZR59 [BH11-2] : F24 : Analysis was performed past the sample holding time. This may increase the variability associated with these results.

Sample AHZR62 [QC-2] : PAH Analysis: Due to the sample matrix, sample required dilution. Detections limit were adjusted accordingly.

VOC/F1 Analysis: Due to a level of petroleum hydrocarbon compounds beyond the appropriate range, the sample required dilution. The detection limits were adjusted accordingly. In order to meet required regulatory criteria, results for selected compounds (obtained by a separate analysis using an appropriate low dilution) are included in the report.

Sample AHZR62 [QC-2] : VOC/F1 Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample AHZR63 [MW12-2] : PAH Analysis: Due to the sample matrix, sample required dilution. Detections limit were adjusted accordingly.

Sample AHZR64 [MW12-7] : F1/BTEX Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample AHZR65 [MW12-8] : VOC/F1 Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample AHZR66 [BH13-5] : PAH Analysis: Due to the sample matrix, sample required dilution. Detections limit were adjusted accordingly.

Bureau Veritas 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvna.com

Sample AHZR67 [TCLP] : NF/NI = Non Flammable and Non Ignitable

Sample AHZR86 [MW4-9] : VOC/F1 Analysis: The sample was analyzed after the 14 day holding time specified by the method had expired.

Sample AHZR91 [MW6-8] : VOC/F1 Analysis: The sample was analyzed after the 14 day holding time specified by the method had expired.

Sample AHZR97 [MW7-7] : VOC/F1 Analysis: The sample was analyzed after the 14 day holding time specified by the method had expired.

Sample AHZS09 [BH11-8] : F2-F4 Analysis: Detection limits were adjusted for high moisture content.

Results relate only to the items tested.

9783050	KIT	Spiked Blank	Available (CaCl2) pH	2024/11/22		100	%	97 - 103

Bureau Veritas 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvna.com

QUALITY ASSURANCE REPORT(CONT'D)

QA/QC Batch	Init	QC Type	Parameter	Date Analyzed	Value	Recovery	UNITS	QC Limits
9783050	KIT	RPD	Available (CaCl2) pH	2024/11/22	0.013		%	N/A

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Leachate Blank: A blank matrix containing all reagents used in the leaching procedure. Used to determine any process contamination.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Matrix Spike exceeds acceptance limits, probable matrix interference

(2) The matrix spike recovery was below the lower control limit. This may be due in part to the reducing environment of the sample. The sample was reanalyzed with the same results.

(3) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

MOE REGULATED DRINKING WATER OR WATER INTENDED FOR HUMAN CONSUMPTION MUST BE SUBMITTED ON THE BUREAU VERITAS DRINKING WATER CHAIN OF CUSTODY

Regulation 153 (2011): ☐ Table 1 ☐ Res/Park ☐ Medium/Fine ☑ Table 2 ☐ Ind/Comm ☑ Coarse ☐ Table 3 ☐ Agri/Other ☐ For RSC ☐ Table ___

Other Regulations: ☐ CCME ☐ Sanitary Sewer Bylaw ☐ Reg 558 ☐ Storm Sewer Bylaw ☐ MISA Municipality ☐ PWQO ☐ Reg 406 Table ☐ Other

Special Instructions:

Include Criteria on Certificate of Analysis (Y/N)? N

ANALYSIS REQUESTED (PLEASE BE SPECIFIC)

Turnaround Time (TAT) Required:
Please provide advance notice for rush projects

Regular (Standard) TAT: ☑
(will be applied if Rush TAT is not specified):
Standard TAT = 5-7 Working days for most tests.
Please note: Standard TAT for certain tests such as BOD and Dioxins/Furans are > 5 days - contact your Project Manager for details.

Job Specific Rush TAT (if applies to entire submission)
Date Required: ___ Time Required: ___ ☐
Rush Confirmation Number: ___ (call lab for #)

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, EPA, APHA or the Quebec Ministry of Environment.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope

dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Soils are reported on a dry weight basis unless otherwise specified.
(2) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

==========

This report has been generated and distributed using a secure automated process.
Bureau Veritas has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation, please refer to the Validation Signatures page if included, otherwise available by request. For Department specific Analyst/Supervisor validation names, please refer to the Test Summary section if included, otherwise available by request. This report is authorized by Rodney Major, General Manager responsible for Ontario Environmental laboratory operations.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	6.3°C

Sample AICG79 [MW5 2] : PAH Analysis: Due to the sample matrix, sample required dilution. Detection limits were adjusted accordingly.

Sample AICG80 [MW5-5] : VOC/F1 Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Results relate only to the items tested.

Bureau Veritas 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvna.com

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) The matrix spike recovery was below the lower control limit. This may be due in part to the reducing environment of the sample. The sample was reanalyzed with the same results.

(2) Duplicate results exceeded RPD acceptance criteria for flagged analytes. Sample extract was reanalyzed with the same results. This is likely due to sample heterogeneity.

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, EPA, APHA or the Quebec Ministry of Environment.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Report Date: 2024/11/14
Report #: R8404781
Version: 1 - Final

CERTIFICATE OF ANALYSIS

BUREAU VERITAS JOB #: C4Z1246
Received: 2024/11/06, 15:38

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

==========

This report has been generated and distributed using a secure automated process.
Bureau Veritas has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation, please refer to the Validation Signatures page if included, otherwise available by request. For Department specific Analyst/Supervisor validation names, please refer to the Test Summary section if included, otherwise available by request. This report is authorized by Rodney Major, General Manager responsible for Ontario Environmental laboratory operations.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	15.3°C
Package 2	15.3°C

Sample AIFD18 [MW3] : PAH-SIM-L : Used part 07 from VOC vials for analysis since part 06 is not available.

Sample AIFD20 [MW6] : Metal Analysis: Due to the sample matrix, sample required dilution. Detection limits were adjusted accordingly.

Sample AIFD21 [MW7] : Metal Analysis: Due to the sample matrix, sample required dilution. Detection limits were adjusted accordingly.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by:

Louise Harding, Scientific Specialist

Bureau Veritas has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation, please refer to the Validation Signatures page if included, otherwise available by request. For Department specific Analyst/Supervisor validation names, please refer to the Test Summary section if included, otherwise available by request. This report is authorized by Rodney Major, General Manager responsible for Ontario Environmental laboratory operations.
